

## Shawnee Pork Site Plan - 120512

Arrows show the direction of storm water drainage. Barns are labeled as shown. Swine barns have the dimensions listed in the site plan with corresponding under floor shallow flush pits. Upper and Lower Barns are identical flushing to the lagoon shown with a storage capacity of 1 million gallons. Mortalities are composted in the 3-bay enclosed composting shed shown above. All storm water drainage from around the site flows overland and through unnamed tributaries ½ mile west to 3 Mile Creek. There was no feed or discharge noted around the perimeter of the buildings during the inspection on 05/11/12.
